Kritical Hacks 2026 · Online round submission guide (deadline 20 Oct 2026, 11:59 PM IST)

Scored out of 100: GitHub repo 20 · TinyFish integration 20 · Social post 10 · Technique 10 · Innovation 20 · Impact 10 · Revenue model 10.

What you submit on Unstop (4 things)

#	Item	Where it comes from	Status
1	Public GitHub repo link	Push `C:\Users\arnit\Desktop\TakeSure` (see step A)	you push
2	Demo video link (2–3 min)	`TakeSure_Demo_KriticalHacks2026.mp4` on the Desktop → upload to YouTube (unlisted is fine) or Google Drive ("Anyone with the link")	you upload
3	Public social media post link	LinkedIn or X post (text below) with the video or 2–3 screenshots and the GitHub link	you post
4	PPT (PDF)	`TakeSure_BugHunters_KriticalHacks2026.pdf` on the Desktop (11 slides incl. TinyFish and Revenue Model)	ready

Do them in the order A → B → C → D below, because the post needs the repo link and the README needs the video and post links.

A. Publish the GitHub repo (20 points)

1. Sign in at github.com → **New repository** → name `takesure` → **Public** → do NOT add a README/.gitignore/licence (the project already has them) → Create.
2. Copy the repo URL, e.g. `https://github.com/<username>/takesure.git`.
3. Open PowerShell in `C:\Users\arnit\Desktop\TakeSure` and run (replace the URL):

```
git remote add origin https://github.com/<username>/takesure.git
git branch -M main
git push -u origin main
```

Windows will open a GitHub sign-in window the first time; sign in and the push completes. 4. Check on github.com that the README renders and that `backend/.env` is **not** in the repo (it is ignored; only `.env.example` is there). 5. Secrets check: the Groq and TinyFish keys live only in `backend/.env` on your laptop. Never paste them into the repo, the README, the post or the video.

B. Demo video (part of the 20 TinyFish points + repo points)

- File: `C:\Users\arnit\Desktop\TakeSure_Demo_KriticalHacks2026.mp4` (1280×720, about 2:40, captions, no voice).
- Optional but better: record a voiced version. Open the MP4 in Clipchamp, add a voice-over reading `TakeSure_Demo_Narration.pdf` (Desktop), export 1080p.
- Upload to YouTube as **Unlisted** (fastest) or to Google Drive with sharing set to "Anyone with the link can view". Copy the link.

C. Social media post (10 points)

Post from any team member's LinkedIn (preferred) or X. Attach the demo video (or 3 screenshots: result screen, Hindi result, Evidence-curation panel) and the GitHub link. Make sure the post is **Public**. Copy the post URL.

Suggested text (edit freely):

> Dadi ka nuskha. Doctor ki dawa. Saath mein safe hai?
>
> In India, 37% of hospital patients take Ayurvedic products alongside allopathic medicines, and only 19% ever tell their doctor. No tool checks the pair. Medscape and 1mg stop at allopathic drugs; Western herb databases have never heard of Himalaya or Dabur.
>
> We built TakeSure: photograph your prescription and your Ayurvedic product (or type the names), and get a GREEN / AMBER / RED verdict in Hindi or English, with the published source, three questions for your doctor, a doctor PDF and a Ministry of Ayush reaction report.
>
> The rule we never break: the verdict comes from published data; AI only explains it.
>
> Our knowledge base is grown and verified by TinyFish web agents: the Fetch API re-opened our citations and verified 55 of 78 automatically (and caught 3 dead links), the Web Agent drafts candidate interactions from clinical monographs, and Search + Agent map Indian products to their herbs. Every draft is reviewed by a human before it can touch a verdict.
>
> Stack: Next.js · FastAPI · Tesseract OCR · RapidFuzz · rule engine over a cited knowledge base · Groq LLM under strict guardrails · TinyFish for curation. 58 tests, runs offline.
>

> Team Bug Hunters — Dhriti Garg, Shiwani Goyal, Khushi Gupta
>
> # HealthTech #Ayurveda #PatientSafety #AI #TinyFish #OpenSource

D. Put the links in the README, push again, then submit on Unstop

1. Open `README.md`, replace `_link added at submission_` (two places near the top) with the video link and the post link. Save.
2. In PowerShell:

```
git add README.md
git commit -m "Add demo video and social post links"
```

```
git push
```

1. On Unstop, open the Kritical Hacks 2026 submission form and paste: GitHub link, video link, post link, and upload the PPT PDF. Submit before 11:59 PM IST.

Judges' quick answers for the TinyFish criterion

- Where is it in the code? `backend/app/services/tinyfish_service.py`, routes in `backend/app/api/routes/curation.py`, panel in `frontend/components/dashboard/Curation.tsx`, tests in `backend/tests/test_tinyfish_curation.py`.
- Is it functional? Yes: live run on 19 Oct verified 55/78 citations, drafted 7 + 4 + 1 candidate rows, mapped one product. The dashboard shows it; the video shows it.
- Why not on the verdict path? Reproducibility and auditability: a medical verdict must give the same answer every time and trace to a cited row. TinyFish makes the knowledge base bigger and better; it does not decide.
