Verdict from data · AI only explains | Hindi + English | Ministry of Ayush ADR format

Is it safe to take this Ayurvedic product with my medicines?

"India's first safety layer between the two medical systems people already mix."

Most patients never tell their doctor about Ashwagandha, Giloy or Chyawanprash. TakeSure reads your prescription and the product label, checks the pair against published evidence, and tells you — in Hindi or English — what to discuss at your next visit.

COVERS TODAY: Thyroid | Diabetes | Blood thinners | Transplant | BP & heart | Mental health | Epilepsy

TIPS FOR A GOOD PHOTO

- Fill the frame with the printed names; handwriting is often unreadable.
- Good light, no glare, no blur. Hold the phone parallel to the pack.
- JPG, PNG, WebP or PDF, up to 8 MB.

PRIVACY

Photos go to the TakeSure server only to be read, and are deleted as soon as the text is extracted. We keep an anonymous record of *which* herbs and medicines were checked — never who checked them.

WHAT HAPPENS NEXT

01 You review every name we read.
02 Rules look up the knowledge base.
03 You get a verdict, sources and three questions.

STEP 2 OF 3

Review what we found

Nothing is checked until you confirm. Remove anything wrong, fix uncertain matches, and add anything we missed.

✓ SCAN OR TYPE — 2 REVIEW NAMES — 3 SAFETY RESULT

Verdict from published data; AI only explains.

Medicines

Thyronorm (Levothyroxine)
read as "Thyronorm" → matched "thyronorm" via brand

score 100 · accepted | Remove

Ayurvedic products & herbs

Ashwagandha
read as "Ashwagandha" → matched "ashwagandha" via exact

score 100 · accepted | Remove

HOW MATCHING WORKS

100 — exact name, brand or synonym from the database.

85+ — close spelling; accepted automatically but still shown here.

70–85 — plausible; you must confirm.

<70 — not recognised.

Thresholds come from the project roadmap and are configurable on the server.

! AMBER Caution — discuss with your doctor

1 record(s) rated AMBER (R3: severity=moderate → AMBER).

MEDICINES	AYURVEDIC PRODUCTS / HERBS	NOT IN DATABASE
Levothyroxine (thyroid hormone)	Ashwagandha (Withania somnifera)	—

Why this verdict? ⌄

What this means

Explained by: AI explainer (groq)

Ashwagandha taken with levothyroxine can raise thyroid hormone levels and may cause over-replacement symptoms such as palpitations, anxiety, tremor, sleep problems, weight loss, or a low TSH on tests. Doctors usually advise not to start or stop either product on your own and to recheck TSH/free T4 about 6-8 weeks after any change, adjusting the levothyroxine dose if needed. This interaction is especially

Three questions to ask your doctor

1. Could taking Ashwagandha with my levothyroxine cause my thyroid levels to become too high?
2. What symptoms should I watch for that might indicate over-replacement?
3. Should I have my TSH and free T4 rechecked after any changes to my Ashwagandha or levothyroxine use?

सुरक्षा परिणाम

Verdict from published data; AI only explains.

English हिन्दी

! पीला सावधानी — अपने डॉक्टर से बात करें

1 record(s) rated AMBER (R3: severity=moderate → AMBER).

दवाइयाँ	आयुर्वेदिक उत्पाद / जड़ी-बूटियाँ	डेटाबेस में नहीं
Levothyroxine (thyroid hormone)	Ashwagandha (Withania somnifera)	—

यह परिणाम क्यों? ˅

इसका क्या मतलब है

व्याख्या: AI व्याख्याकार (groq)

अश्वगंधा को लेवोथायरॉक्सिन के साथ लेने से थायरॉइड हार्मोन बढ़ सकते हैं, जिससे धड़कन तेज़ होना, चिंता, कंपकंपी, नींद में बाधा, वजन घटना या टेस्ट में टीएसएच कम दिखना जैसे लक्षण हो सकते हैं। यह मध्यम जोखिम (एम्बर) वाला इंटरैक्शन है। आपका डॉक्टर किसी भी बदलाव के 6-8 हफ्ते बाद थायरॉइड टेस्ट दोबारा करवा सकता है और आवश्यकतानुसार लेवोथायरॉक्सिन की मात्रा समायोजित कर सकता है।

डॉक्टर से पूछने के लिए तीन सवाल

1. क्या अश्वगंधा लेना मेरे लेवोथायरॉक्सिन की खुराक को प्रभावित कर सकता है?
2. यदि मैं अश्वगंधा ले रहा हूँ, तो मुझे थायरॉइड टेस्ट कितनी बार करवाने चाहिए?
3. क्या मेरे पास हाइपरथायरॉइड या गर्भावस्था जैसी स्थितियों के कारण इस संयोजन से अतिरिक्त जोखिम है?

!! RED Important — talk to your doctor before taking together

1 record(s) rated RED (R5: severity=moderate, drug class 'anticoagulant' is high-risk → escalated to RED).

MEDICINES	AYURVEDIC PRODUCTS / HERBS	NOT IN DATABASE
Warfarin (anticoagulant)	Guggul (Commiphora wightii)	—

Why this verdict? ˅

What this means

Explained by: AI explainer (groq)

Guggul can increase the risk of bleeding when taken with warfarin because it may inhibit platelet aggregation. Your doctor may monitor you for signs of bleeding and check your INR more often.

Three questions to ask your doctor

1. Can Guggul increase my risk of bleeding while I am on warfarin?
2. What signs of bleeding should I watch for while taking these together?
3. Should my INR be checked more frequently because I

• HOW IT WORKS

A verdict you can audit, an explanation you can read.

TakeSure separates two jobs that are usually blurred together: deciding, which is done by fixed rules over a cited database, and explaining, which is the only thing the AI does.

• Verdict from published data; AI only explains.

01

Scan — the photo is read on the server

Photos of the prescription and the product label are converted to text with Tesseract running locally (English + Hindi), or with a vision model when a Groq key is configured. The file is deleted the moment extraction finishes. If reading fails you are told exactly why and offered manual entry.

02

Match — names become database entities

Dosage forms and strengths ("Tab.", "50 mcg", "1-0-0") are stripped. Remaining words are matched against brands, generics, Sanskrit/Hindi/Latin synonyms and branded products using RapidFuzz. Score ≥85 is accepted, 70–85 asks you to confirm, below 70 is "not recognised". Thyronorm → levothyroxine; Chyawanprash → its constituent herbs.

03

Decide — rules over the knowledge base

04

Explain — AI translates, never decides
